1 LISTENING COMPREHENSION

PEMAHAMAN MENDENGARKAN

Time: Approximately 40 Minutes (50 Questions)
Now set your clock for 40 minutes

In this section of the test, you will have an opportunity to demonstrate your ability to understand conversations and talks in English. There are three parts to this section with special directions for each part. Answer all the questions on the basis of what is stated or implied by the speakers in this test. When you take the actual TOEFL test, you will not be allowed to take notes or write in your test book.

PART A

DIRECTIONS

In Part A, you will hear short conversations between two people. After each conversation, you will hear a question about the conversation. The conversations and questions will not be repeated. After you hear a question, read the four possible answers in your test book and choose the best answer. Then, on your answer sheet, find the number of the question and fill in the space that corresponds to the letter of the answer you have chosen.

Now begin work on the questions.

1. (A) It could use more salt.
   (B) It is very hot.
   (C) It tastes fine.
   (D) It's quite salty.

2. (A) Ask the woman to give him free gas.
   (B) Buy some food for the woman.
   (C) Drive his car to Bradford Street.
   (D) Go to the nearest gas station.

3. (A) Apply for the position.
   (B) Complete the form.
   (C) Discuss with his parents.
   (D) Send the form by post.

4. (A) At the man's house.
   (B) At the woman's living room.
   (C) At their dining room.
   (D) On a filming site.

5. (A) To accept the proposal.
   (B) To listen to her story.
   (C) To lower the volume.
   (D) To reject the offer.

6. (A) Both the woman and Mike did not like the movie.
   (B) Mike was the only one who watched the movie.
   (C) She thought the movie was great.
   (D) They didn't get to see the movie.

7. (A) No one adores Principal Day.
   (B) The woman is expected by everyone to look for Principal Day.
   (C) The woman is not the only one who respects Principal Day.
   (D) They and everyone else should get ready to celebrate.

8. (A) Brenda is more diligent than she seems.
   (B) Brenda is not very lazy.
   (C) Brenda is the laziest person that he knows.
   (D) The woman is lazier than Brenda.

9. (A) At a barber shop.
   (B) At a cinema.
   (C) At a hair salon.
   (D) At a tailor.

10. (A) Asking permission from the professor will be hard.
    (B) The professor will gladly give his permission.
    (C) The woman could help by recommending the man to the professor.
    (D) The woman's help is not welcomed.

11. (A) He could not be angry.
    (B) He doesn't feel sad at all.
    (C) He is sad.
    (D) He is very angry.

12. (A) a head start on the job.
    (B) a job recommendation.
    (C) a salad.
    (D) an appetizer.

13. (A) During a phone call.
    (B) In a middle of a meeting.
    (C) When ordering something in a café.
    (D) While waiting in a queue.

14. (A) To check another shelf in the refrigerator.
    (B) To drop by at the supermarket.
    (C) To let the butter melt for two seconds.
    (D) To replace the butter with another ingredient.

15. (A) He agrees with the woman.
    (B) He asks the woman to repeat her sentence.
    (C) He doesn't share the same opinion as the woman.
    (D) He thinks the woman should complain to the professor.

16. (A) She barely passed the subject.
(B) She didn't take the subject.
(C) She hurt her teeth before the exam.
(D) She passed the subject with a good score.

17. (A) A chef.
(B) A food critic.
(C) A waiter.
(D) The man's partner.

18. (A) Andy doesn't want to accept the man's advice.
(B) Andy has his own way in doing something.
(C) Andy is the boss, so he can do whatever he wants.
(D) Andy needs to learn by making mistakes.

19. (A) At a check-in counter.
(B) At a restaurant.
(C) In a theatre.
(D) In an airplane.

20. (A) Book a trip.
(B) Call her friends.
(C) Read the brochures.
(D) Recommend a place for the man to visit.

21. (A) Baltimore is very far.
(B) He doesn't know about the trip.
(C) He goes to Baltimore every weekend.
(D) He thinks the trip is not cancelled.

22. (A) Discussing the answers for Biology exam.
(B) Reviewing for his exam.
(C) Rewriting his final paper.
(D) Submitting his assignment.

23. (A) He broke his hip.
(B) He needed to fry some chips.
(C) His car stopped functioning.
(D) His ceiling was leaking.

24. (A) He lost at the competition despite his effort.
(B) He lost because he didn't have enough preparation.
(C) He practiced a lot and won the competition.
(D) He won the competition easily.

25. (A) Daniel is surprised with the fame.
(B) He is famous for his hard work.
(C) He is not as famous as he wants.
(D) The fame has never bothered him.

26. (A) From a newspaper.
(B) From a radio.
(C) From his friend.
(D) From the event's social media.

27. (A) By bus.
(B) By taxi.
(C) By train.
(D) On foot.

28. (A) Monday at 1 p.m.
(B) Tuesday at 3 p.m.
(C) Wednesday at 1 p.m.
(D) Thursday at 3 p.m.

29. (A) Not to give Rita a second chance.
(B) Not to judge Rita severely.
(C) To cut Rita's salary.
(D) To take care of Rita's mother.

30. (A) He feels as nervous as the woman.
(B) He reminds the woman that she broke his leg.
(C) He wants the woman to be careful.
(D) He wishes the woman good luck.

PART B

DIRECTIONS

In Part B, you will hear longer conversations. After each conversation, you will be asked some questions. The conversations and questions will be spoken just one time. They will not be written out for you, so you will have to listen carefully in order to understand and remember what the speaker says.

When you hear a question, read the four possible answers in your test book and decide which one would be the best answer to the question you have heard. Then, on your answer sheet, find the number of the problem and fill in the space that corresponds to the letter of the answer you have chosen.

31. (A) Client and consultant.
(B) Co-workers.
(C) Employee and customer.
(D) Husband and wife.

32. (A) Buyback.
(B) BuyIt.
(C) JustBuy.
(D) Sell&Buy.

33. (A) CEO.
(B) General Manager.
(C) Marketing Director.
(D) Sales Director.

34. (A) He has many great ideas.
(B) He is a caring person.
(C) He is very dedicated to his work.
(D) He is young.

35. (A) Mr. Brosnan.
(B) Ms. Windsor.
(C) The man.
(D) The woman.

36. (A) A check-in officer.
(B) A custom officer.
(C) A flight attendant.
(D) The man's wife.

37. (A) 1 day.
(B) 3 days.
(C) 5 days.
(D) 7 days.

38. (A) To attend a business conference.
(B) To have a holiday.
(C) To meet his prospective employer.
(D) To visit his family.

39. (A) 1 person.
(B) 2 people.
(C) 3 people.
(D) 4 people.

40. (A) His health should be monitored.
(B) His luggage needs to be checked.
(C) His plant needs to be quarantined.
(D) Some of his duty-free items need to be declared.

PART C

DIRECTIONS

In Part C, you will hear several talks. After each talk, you will be asked some questions. The talks and questions will be spoken just one time. They will not be written out for you, so you will have to listen carefully in order to understand and remember what the speaker says. When you hear a question, read the four possible answers in your test book and decide which one would be the best answer to the question you have heard. Then, on your answer sheet, find the number of the problem and fill in the space that corresponds to the letter of the answer you have chosen

41. (A) Reasons of why people have a phobia.
(B) The advantages of having a little pet.
(C) The origin of pet peeves concept.
(D) Types of house pet.

42. (A) Annoyance.
(B) Experience.
(C) Irritating.
(D) Minor.

43. (A) Alley Gasoline.
(B) Frank King.
(C) Gasoline Alley.
(D) King Frank.

44. (A) It appears suddenly.
(B) It cannot be cured.
(C) It causes major annoyance to most people.
(D) It seems normal to other people.

45. (A) Angry because of messy desks.
(B) Annoyed when someone interrupts him/her.
(C) Shortness of breath due to seafood allergy.
(D) The lid on the copier is being left up.

46. (A) To contract muscles.
(B) To ensure smooth air exchange.
(C) To expel foreign particles.
(D) To send an impulse to the brain.

47. (A) Brain.
(B) Diaphragm.
(C) Nasal passage.
(D) Trigeminal nerve.

48. (A) Through mouth only.
(B) Through nose and mouth.
(C) Through nose only.
(D) Through nose, mouth, and ears.

49. (A) When eating.
(B) When fully alert.
(C) When sleeping.
(D) When taking a shower.

50. (A) Business Studies.
(B) Health Science.
(C) Psychology.
(D) Social Ethics.

2 STRUCTURE AND WRITTEN COMPREHENSION

STRUKTUR KALIMAT & UNGKAPAN TERTULIS

Time: Approximately 25 Minutes (40 Questions)
Now set your clock for 25 minutes

This section is designed to measure your ability to recognize language that is appropriate for standard written English. There are two types of questions in this section, with special directions for each type.

DIRECTIONS

Questions 1—15 are incomplete sentences. Beneath each sentence you will see four words or phrases, marked (A), (B), (C), and (D). Choose the one word or phrase that best completes the sentence. Then, on your answer sheet, find the number of the question and fill in the space that corresponds to the letter of the answer you have chosen. Fill in the space so that the letter inside the oval cannot be seen.

1. In the past 10 years, employers have ... from collaborative projects in product development.
   (A) been seen marked benefits
   (B) saw benefits marked
   (C) seeing marking benefits
   (D) seen marked benefits

2. Recent studies are showing that ... a 15 to 30-minute nap while at work in the afternoon, they will be more alert, more energetic, happier doing what they do.
   (A) if employees can take
   (B) if employees could have taken
   (C) if employees could take
   (D) unless employees take

3. The term "hypnotism" was first used by ... who studied suggestion and hypnosis in the mid-1800s
   (A) a British James Braid
   (B) a British physician James Braid
   (C) James Braid, a British
   (D) James Braid, a British physician

4. Developed by Dr. Terence Mearden, "Plasma Vortex Theory" theorizes that electrified air (plasma), on the side of hills, ... mini-tornadoes and screws down onto the ground, creating the circles.
   (A) became
   (B) become
   (C) becomes
   (D) becoming

5. Entitled "The Coming Anarchy", ... by Robert Kaplan paints a horrifying picture of the future for humanity.
   (A) reported
   (B) reporting
   (C) reports
   (D) the report

6. Health geography is the combination of knowledge regarding geography including methods used to … geographical information and the study of health.
   (A) analyze and interpret
   (B) analyzed and interpreted
   (C) analyzes and interprets
   (D) analyzing and interpreting

7. Glass blowing became the … to make glass containers from the first century BC.
   (A) more common way
   (B) more common ways
   (C) most common way
   (D) most common ways

8. No unnecessary drugs should … during pregnancy.
   (A) be taken
   (B) be taking
   (C) take
   (D) took

9. People who have suffered malaria … build up body defenses against it.
   (A) repeat
   (B) repeated
   (C) repeatedly
   (D) repeats

10. Freegans, … lifestyle is trying to use less, recycle and help each other fix things instead of throwing them away.
   (A) which
   (B) who
   (C) whom
   (D) whose

11. Porcelain is … than either glass or clay due to the addition of a few more minerals.
   (A) stronger
   (B) strong
   (C) more strong
   (D) strongest

12. Dambisa Moyo, … economist, proposes that international aid is largely to blame for African poverty because it has encouraged dependence and corruption, and has diverted talented people from business.
   (A) a Zambian-born
   (B) an Zambian
   (C) born in Zambia
   (D) Zambian

13. It was virtually unheard … for people to start courses in their forties or fifties.
    (A) by
    (B) from
    (C) of
    (D) on

14. The word "banana" … English via Portuguese from Wolof – a West African language.
    (A) entered
    (B) entering
    (C) enters
    (D) has entered

15. Perhaps the most fundamental step in developing a sense of number is not the ability to count, but rather to see that a number is really an abstract idea … to a group of particular objects.
    (A) instead a simple attachment
    (B) instead attaching
    (C) instead of a simple attachment
    (D) instead of attached

DIRECTIONS

In questions 16—40 each sentence has four underlined words or phrases. The four underlined parts of the sentence are marked (A), (B), (C), and (D). Identify the one underlined word or phrase that must be changed in order for the sentence to be correct. Then, on your answer sheet, find the number of the question and fill in the space that corresponds to the letter of the answer you have chosen.

16. A recent issue of the New York Times reports that many companies are looking for
    A B
    smart students who may a budding interest in IT.
    C D

17. A large area outside the city where large amounts of rubbish are buried are called
    A B C D
    landfill.

18. Freeganism started in the 1990s in the U.S. and arose from environment and
    A B C D
    anti-globalization movements.

19. Thomas Jefferson founded (A) the University of Virginia, designed most of its early (B) buildings, define (C) its curriculum, and became its (D) first rector or chancellor.

20. The (A) nap zone, documented (B) in numerous studies, is typical (C) between noon (D) and 3.00 pm.

21. The key to negotiation is to realize that all parties (A) need to gain something of value (B) in exchange with (C) any concessions (D) they make.

22. One of the reasons (A) of people becoming (B) freegans is that they think people should spend (C) more time with our (D) friends and families, and less time working for money.

23. Anyone who owns (A) a pet is (B) familiar to (C) the range of communication possible (D) between animals and humans.

24. Fluorescent microscopy is used to image (A) the structural components of cells, for example, their (B) DNA or RNA, to reveal abnormalities (C), or indicate whether a cell is dead nor (D) alive.

25. Modelled (A) by (B) Andrea Palladio's 16th-century Italian villas, Monticello is (C) a tribute to the man and style that Jefferson idolized (D).

26. For around fifteen hundred (A) years, porcelain has employed (B) as tableware and decoration, but its more recent (C) applications include (D): dental crown and electrical insulators.

27. Bananas are herbs (A), not trees, although (B) it (C) can reach more than seven meters (D).

28. Psychiatrists recommend bananas as they increasing dopamine levels in the brain,
A B C D
thus improving mood.

29. From a fossil discovered on Kazakhstan, scientists suspect that Pterosaurs had a
A B C
covering resembling fur.
D

30. Blue-green algae can grows at very high temperatures and under high-intensity
A B C
light.
D

31. Red alga secretes lime from the seawater to fostering the formation of limestone
A B C
deposits.
D

32. Narcolepsy is disease characterized by malfunctioning sleep mechanics.
A B C D

33. The first company of its type, Federal Express was founded by the youthful
A B C
Fred Smith in 1971, when it was only 28 years old.
D

34. The 112-carat blue stone that later became the Hope Diamond was mined in India
A B
sometime before the middle of the seventeen century and was first known to be
C
owned by Shah Jahan, who built the Taj Mahal in memory of his beloved wife.
D

35. One identifying characteristics of minerals is their relative hardness, which can be
A B
determined by scratching one mineral with another.
C D

36. Hurricanes generally occur in the North Atlantic from May through November, with
A B
the peak of the hurricane season in September; only rarely they will occur from
C D
December through April in that part of the ocean.

37. A hoax, dislike an honest error, is a deliberately concocted plan to present an untruth as the truth.
A B C D

38. Meerkats devote a significant part of their day to foraging for food with their sensitive nose.
A B C D

39. Hurricanes are typically associated with loss of life, loss of property and economic devastated.
A B C D

40. For every ton of waste paper that get recycled, 13 trees are saved.
A B C D

3 READING COMPREHENSION

PEMAHAMAN BACAAN

Time: Approximately 55 Minutes (50 Questions)
Now set your clock for 55 minutes

This section is designed to measure the ability to read and understand short passages similar in topic and style to those found in North American universities and colleges. Examinees read a variety of short passages on academic subjects. Each passage is followed by a number of questions about the material. To avoid creating an advantage to individuals in any one field of study, sufficient context is provided so that no subject-specific familiarity with the subject matter is required to answer the questions.

DIRECTIONS

In this section you will read several passages. Each one is followed by several questions about it. For this section, you are to choose the one best answer, (A), (B), (C), or (D), to each question. Then, on your answer sheet, find the number of the question and fill in the space that corresponds to the letter of the answer you have chosen.

Now begin work on the questions.

Question 1—6

Line

Despite the fact that "health care" is a term that reflects the more recent phenomenon of the practice of health care as expanded beyond the practice of medical care, ethical concerns related to health care can be traced back to the beginnings of medical care. While this would take us back to primitive cultures at the time of the origin of human life as we know it, the first known evidence of ethical concerns in the practice of medicine in Western cultures is what has been handed down as the Corpus Hippocraticum, which is a compilation of writings by a number of authors, including a physician known as Hippocrates, over at least a few centuries, beginning in the 5th century, B.C.E., and which includes what has come to be known as the Oath of Hippocrates. According to these authors, medical care should be practiced in such a way as to diminish the severity of the suffering that illness and disease bring in their wake, and the physician should be acutely aware of the limitations concerning the practical art of medicine and refrain from any attempt to go beyond such limitations accordingly. The Oath of Hippocrates includes explicit prohibitions against both abortion and euthanasia but includes an equally explicit endorsement of an obligation of confidentiality concerning the personal information of the patient.

Additional codes of ethics concerning the practice of medicine have also come down to us: from the 1st century A.D., known as the Oath of Initiation, attributed to Caraka, an Indian physician; from (likely) the 6th century A.D., known as the Oath of Asaph, written by Asaph Judaeus, a Hebrew physician from Mesopotamia; from the 10th century A.D., known as Advice to a Physician, written by Haly Abbas (Ahwazi), a Persian physician; from the 12th century A.D, known as the "Prayer of Moses Maimonides," Maimonides being a Jewish physician in Egypt; from the 17th century A.D., known as the Five Commandments and Ten Requirements, written by Chen Shih-kung, a Chinese physician; from the 18th century A.D, known as A Physician's Ethical Duties, written by Mohamad Hosin Aghili, a Persian; and many more.

In 1803, Thomas Percival in England published his Medical Ethics: A Code of Institutes and Precepts, adapted to the Professional Conduct of Physicians and Surgeons, which included professional duties on the part of physicians in private or general practice to one's patients. The founding of the American Medical Association in 1847 was the occasion for the immediate formulation of standards for an education in medicine and for a code of ethics for practicing physicians.

This Code of 1847 included not only "duties of physicians to their patients" but also "obligations of patients to their physicians," and not only "duties of the profession to the public" but also "obligations of the public to physicians." From the 19th century to well into the 20th century, societies or associations of medical doctors formulated and published their own codes of ethics for the practice of medicine.

A good number of medical codes of ethics were formulated and adopted by national and international medical associations during the middle part of the 20th century. In an effort to modernize the Oath of Hippocrates for practical application, in 1948 the World Medical Association adopted the Declaration of Geneva, followed the very next year by its adoption of the International Code of Medical Ethics. The former included, in addition to an enumeration of a physician's moral obligations to one's patients, an explicit commitment to the humanitarian goals of medicine. Since then, virtually every professional occupation that is health care-oriented in the U. S. has established at least one association for its membership and a code of professional ethics. In addition to the American Medical Association, there is the American Nurses Association, the American Hospital Association, the National Association of Social Workers, and many others.

1. Based on the passage, what is Corpus Hippocraticum?
   (A) A compilation of evidence that Hippocrates practiced medicine in Western culture.
   (B) A compilation of Hippocrates' oath as a physician.
   (C) A compilation of prescriptions written by many famous physicians.
   (D) A compilation of writings written by many authors including Hippocrates.

2. The word "these authors" in line 9 refers to …
   (A) Hippocrates.
   (B) The writers of ethical concerns in Western Medicine.
   (C) Those who contributed in Corpus Hippocraticum.
   (D) Those whose prescriptions were included in Corpus Hippocraticum.

3. Below is the content of Oath of Hippocrates, EXCEPT …
   (A) Abortion ban.
   (B) Confidentiality of patient's information.
   (C) Consent for euthanasia.
   (D) Restriction in sharing personal information of a patient.

4. What is the main idea of paragraph 2?
   (A) Additional codes of medical ethics.
   (B) Other codes that replaced Oath of Hippocrates.
   (C) Various codes used by various countries.
   (D) Various standards used in the practical of medicine.

5. When was The American Medical Association founded?
   (A) In 1487.
   (B) In 1803.
   (C) In 1847.
   (D) In 1948.

6. The word "virtually" in line 46 is closest in meaning to ....
   (A) actually
   (B) almost
   (C) make-believe
   (D) simulated

Questions 7—18

Line

Up until modern times, the alphabet was a work-in-progress that went as far back as ancient Egypt. We know this because the earliest evidence of a consonant-based alphabet, in the form of graffiti-style inscriptions, was discovered along the Sinai Peninsula.

(5) Not too much is known about these mysterious scripts except they're likely a collection of characters adapted from Egyptian hieroglyphs. It's also unclear whether these early scripts were written by the Canaanites who inhabited the area around 19th century B.C. or a Semitic population that occupied central Egypt in 15th century B.C.

(10) Whatever the case, it wasn't until the emergence of the Phoenician civilization, a collection of city-states strewn along Egypt's Mediterranean coast, that the Proto-Sinaitic script was widely used. Written from right to left and consisting of 22 symbols, this unique system would eventually spread throughout the Middle East and across Europe through maritime merchants who carried out

(15) commerce with nearby groups of people.

By the 8th century B.C., the alphabet had made its way to Greece, where it was altered and adapted to the Greek language. The biggest change was the addition of vowel sounds, which many scholars believed marked the creation of the first true alphabet that allowed for a clear pronunciation of specific Greek

(20) words. The Greeks also later made other significant modifications such as writing letters from left to right.

At about the same time toward the east, the Phoenician alphabet would form the early basis for the Aramaic alphabet, which serves as the foundation for Hebrew, Syriac, and Arabic written systems. As a language, Aramaic was spoken

(25) throughout the Neo-assyrian empire, Neo-babylonian empire and perhaps most prominently among Jesus Christ and his disciples. Outside of the Middle East, remnants of its use have also been found in parts of India and central Asia.

Back in Europe, the Greek alphabet system reached the Romans around the 5th century B.C., through exchanges between Greek and Roman tribes that resided

(30) along the Italian peninsula. The Latins made some minor changes of their own,

dropping four letters and adding others. The practice of modifying the alphabet was commonplace as nations began to adopt it as a writing system. The Anglo-Saxons, for instance, used Roman letters to write old English after the kingdom's conversion to Christianity, and made a series of alterations that later became the foundation for the modern English we use today.

Interestingly enough, the order of the original letters has managed to remain the same even as these variants of the Phoenician alphabet were changed to suit the local language. For example, a dozen stone tablets unearthed in ancient Syrian city of Ugarit, which dated back to the 14th century B.C., depicted an alphabet that resembled bits of the Latin alphabet in its standard letter order. New additions to the alphabet often were placed at the end, as was the case with X, Y, and Z.

But while the Phoenician alphabet can be considered the father of just about all written systems in the west, there are some alphabets that bear no relation to it. This includes the Maldivian script, which borrows elements from Arabic but derived many of its letters from numerals. Another one is the Korean alphabet, known as Hangul, which groups various letters together into blocks that resemble Chinese characters to produce a syllable. In Somalia, the Osmanya alphabet was devised for the Somali in the 1920s by Osman Yusuf Kenadid, a local poet, writer, teacher, and politician. Evidence of independent alphabets were also found in medieval Ireland and the old Persian empire.

And in case you're wondering, the alphabet song used to help young children learn their ABCs only came about relatively recently. Originally copyrighted by Boston-based music publisher Charles Bradlee under the title "The ABC: A German Air With Variations for the Flute With an Easy Accompaniment for the Piano Forte," the tune is modeled after Twelve Variations on "Ah vousdirai-je, Maman," a piano composition written by Wolfgang Amadeus Mozart.The same tune has also been used in "Twinkle, Twinkle, Little Star" and "Baa, Baa, Black Sheep."

7. What was discovered along the Sinai Peninsula?
   (A) Consonant-based alphabet
   (B) Egyptian alphabets
   (C) Modern alphabet
   (D) Vowel-based alphabet

8. What can be inferred about Proto-Sinaitic script?
   (A) It consisted of 26 symbols
   (B) It was spread out to Middle East by merchants
   (C) It was used by the Canaanites along Egypt's Mediterranean coast
   (D) It was written from left to right

9. What was the difference between Greek alphabet and Egyptian alphabet?
   (A) Egyptian alphabet didn't include vowels
   (B) Greek alphabet didn't have vowels

(C) The Egyptian removed vowels from Greek alphabet
(D) The Greek added consonant to Egyptian alphabet

10. The word "significant" in line 20 could be best replaced by ....
    (A) important
    (B) trivial
    (C) frivolous
    (D) serious

11. Below written systems follow Aramaic alphabet EXCEPT ....
    (A) Arabic
    (B) Hebrew
    (C) Phoenician
    (D) Syriac

12. The word "disciples" in line 26 is closest in meaning to ....
    (A) followers
    (B) hosts
    (C) leaders
    (D) opponents

13. How did Roman modify the Greek alphabet?
    (A) Adding seven vowels to the alphabet
    (B) Changed the writing style from left to right
    (C) Dropped four letters from the alphabet
    (D) Removed the pronunciation of the alphabet

14. The word "alterations" in line 34 could be best replaced by ....
    (A) Modifications
    (B) Remake
    (C) Stagnation
    (D) Torpidity

15. What thing that remained the same after all the alterations made by various nations?
    (A) The order of the letters
    (B) The pronunciation of the letters
    (C) The shape of the letters
    (D) The style of the letters

16. The word "unearthed" in line 38 is closest in meaning to ....
    (A) Caused something to occur in a particular way
    (B) Found something in the ground by digging
    (C) Left something uncovered
    (D) Resolved something

17. What is the main idea of paragraph 8?
    (A) Alphabets that do not follow Phoenician alphabet system
    (B) Alphabets that make minor modifications from Phoenician alphabet system
    (C) Examples of alphabets modified from Chinese characters
    (D) The similarities between Hangul and Osmanya alphabet

18. Below statement is true about the alphabet song, EXCEPT ....
    (A) It has the same tune as "Twinkle, Twinkle, Little Star"
    (B) It is used to help young children learn their alphabets easily
    (C) It was produced by Charles Bradlee
    (D) Its original title was replaced by Mozart

Questions 19—26

Line

Traditionally, philosophers have likened memory to a storehouse or a recording device. In the Theaetetus, Plato claims that the mind is analogous to a wax tablet. To perceive is to make an impression on the tablet, leaving behind an exact image or representation of what was perceived. Memory keeps the images and forgetting is a matter of losing them. In his Confessions, Augustine says perception deposits images of objects into the storehouse of memory and the process of recalling is the process of retrieving these deposits. Locke and Hume tell much the same story, as do many other philosophers up through the 20th century.

On this storehouse view, memory stockpiles experiences and beliefs. Stored items may eventually degrade or become hard to access, but otherwise do not change (see Audi (1994: 420-1), Burge (1997: 321) and McGrath (2007: 13)). This view is commonsensical. It explains how it is that we are able to represent the past accurately in our thoughts and recollective experiences. It also explains why each of us, over time, tends to believe the same thing concurrently more than once. ("For example") Yesterday, Maria believed that she went to high school in Santa Fe and she believes that today too.

During the 20th century, psychologists generally abandoned the storehouse view (see for example Bartlett (1932) and Schacter (1996, 2002)), though still thinking that memory stores information. They believe human memory processing is much more complicated than the mere depositing of items and later withdrawing them. Memory selectively stores information, expands part of it, combines it with background information and adds data from the context, in which the subject later retrieves the information. In other words, memory generally alters significantly what enters it. As a result, recollecting is not the retrieving, but rather the generating of representations of the past. Recollecting actually generates new beliefs about the past. Empirically minded philosophers of memory also have generally abandoned the storehouse view in favor of this generative view (see, for example, Debus (2010) and Michaelian (2011a, 2011b)),

but epistemologists have been slower to shift models. Since this article covers the epistemological discussion of memory up to the beginning of the 21st century, the storehouse view will generally be implicit.

Setting aside how exactly memory works, it will aid our epistemological discussion to get clearer on what memory is of or for. At least as far back as Henri Bergson (1896/1994) and Bertrand Russell (1921/1995), philosophers have recognized that there are different kinds of memory, or different memory systems and 20th century psychological research has confirmed the philosophers' distinctions. Talk of 'memory' simplicities, as if there were a single, uniform faculty, can obscure it. Distinct memory systems allow us to do different things and consist of different networks of rule-governed psychological processes. Two memory systems that are important to distinguish are declarative memory and procedural memory. Declarative memory is memory of information and events. Procedural memory is memory for skills and of how to perform actions. Different parts of the brain house, on the one hand, our data about bicycle riding and our riding experiences and, on the other hand, our acquired talent for riding. This helps explain the familiar phenomenon of finding it easy to do something, yet hard to state instructions for doing it (think of swimming, playing a flute, or tying a shoe), or vice versa.

Declarative memory divides into semantic (or propositional) memory and episodic (or experiential) memory. Semantic memory is memory for propositions and episodic memory is memory for events, one has experienced. To see this distinction, consider how these types of memory can come apart. You remember that Plato taught Aristotle, but you do not remember Plato teaching Aristotle. How could you remember it? You were neither there nor did you witness it. I can remember that I was born in a hospital, but (mercifully) I cannot remember being born in a hospital.

Semantic memory underlies memories with propositional content; semantic memory claims are often of the form "S remembers that p". Episodic memory underlies memories with a kind of non-propositional content; episodic memory claims are often of the form "S remembers x". Semantic memory is by far the most discussed memory system in epistemology. This is understandable, since epistemology centers on states that have propositional content. Epistemologists primarily discuss what it is for S to know that p, or what it is for S to have justification for believing that p, or the like. They focus less on non-propositional knowledge and justification. The epistemology of memory, as a result, has chiefly been the epistemology of semantic memory.

But it is worth noting that neglecting to consider other memory systems can render our epistemological theories vulnerable. Some philosophers have objected to certain theories of propositional knowledge on the grounds that they do not accommodate the role that episodic memory plays in our believing (see, for example, Shanton (2011)). And deeper reflection on procedural memory may

advance other debates in epistemology, such as debates concerning knowledge-how. Knowledge-how is a practical knowledge, what you have when you know how to swim or how to tie a shoe. There is debate about whether knowledge-how is reducible to knowledge-that. That is, there is debate about whether practical knowledge can be fully understood in terms of knowing various propositions. But procedural memory seems to ground our knowledge-how and it differs importantly from declarative memory (see Michaelian (2011a)). In fact, psychological research suggests that sophisticated procedural memory can be retained even when semantic memory is crippled (one artist entirely lost his knowledge of language due to brain-damage, having to relearn his native tongue altogether and yet he remembered how to paint! See Schacter (1996: 140-2)). Investigating procedural memory may help reveal that knowledge-how is not reducible to knowledge-that.

19. What analogy that Plato used to describe "mind"?
    (A) A deposit.
    (B) A recording device.
    (C) A storehouse.
    (D) A wax tablet.

20. What did Augustine, Locke and Hume have in common?
    (A) The same idea of how memory works.
    (B) The same interest in Theaetetus.
    (C) They deposited their time studying about mind.
    (D) They were Plato's disciples.

21. The word "degrade" in line 11 is closest in meaning to ....
    (A) assist
    (B) enhance
    (C) hjumiliate
    (D) weaken

22. The synonym for word "withdraw" in line 22 could be found in ....
    (A) line 6
    (B) line 20
    (C) line 24
    (D) line 28

23. What is the example of "procedural memory"?
    (A) First birthday memory.
    (B) Memory of a good movie.
    (C) Memory of how to ride a bike.
    (D) Sad memory.

24. Which memory is discussed more than the others?
    (A) Emotional Memory.
    (B) Episodic memory.
    (C) Procedural memory.
    (D) Semantic Memory.

25. The definition of "knowledge-how" could be found in ....
    (A) line 73
    (B) line 74
    (C) line 75
    (D) line 76

26. The word "crippled" in line 80 is closest in meaning to ....
    (A) damaged
    (B) disability
    (C) fixed
    (D) unbroken

Questions 27—40

Line

The Great Pyramid of Giza, located about ten miles southwest of Cairo, was built as a burial site for Egyptian pharaoh Khufu in the 26th century BCE. Standing at 481 feet high, the Great Pyramid was not only the largest pyramid ever built, it remained one of the tallest structures in the world until the late 19th century. (5) Impressing visitors with its massiveness and beauty, it's no surprise that the Great Pyramid at Giza was considered one of the Seven Ancient Wonders of the World. Amazingly, the Great Pyramid has withstood the test of time, standing for over 4,500 years; it is the only Ancient Wonder to have survived to the present.

Khufu (known in Greek as Cheops) was the second king of the 4th dynasty (10) in ancient Egypt, ruling for about 23 years in the late 26th century BCE. He was the son of Egyptian Pharaoh Sneferu and Queen Hetepheres I. Sneferu remains famous for being the very first pharaoh to build a pyramid.

Despite fame for building the second and largest pyramid in Egyptian history, there's not a lot more that we know about Khufu. Only one, extremely tiny (three (15) inch), ivory statue has been found of him, giving us just a glimpse at what he must have looked like. We know that two of his children (Djedefra and Khafre) became pharaohs after him and it is believed that he had at least three wives.

Whether or not Khufu was a kind or evil ruler is still debated. For centuries, many believed that he must have been hated because of stories that he used (20) slaves to create the Great Pyramid. This has since been found untrue. It is more likely that the Egyptians, who viewed their pharaohs as god-men, found him not as beneficent as his father, but still a traditional, ancient-Egyptian ruler.

The Great Pyramid is a masterpiece of engineering and workmanship. The accuracy and precision of the Great Pyramid astounds even modern builders. It

stands on a rocky plateau located on the west bank of the Nile River in northern Egypt. At the time of construction, there was nothing else there. Only later did this area become built up with two additional pyramids, the Sphinx, and other mastabas.

The Great Pyramid is huge, covering a little over 13 acres of ground. Each side, although not exactly the same length, is about 756-feet long. Each corner is nearly an exact 90-degree angle. Also interesting is that each side is aligned to face one of the cardinal points of the compass—north, east, south, and west. Its entrance lies in the middle of the north side.

The structure of the Great Pyramid is made from 2.3 million, extremely large, heavy, cut-stone blocks, weighing an average of 2.5 tons each, with the largest weighing 15 tons. It is said that when Napoleon Bonaparte visited the Great Pyramid in 1798, he calculated that there was enough stone to build a one-foot-wide, 12-feet-high wall around France.

On top of the stone was placed a smooth layer of white limestone. At the very top was placed a capstone, some say made of electrum (a mixture of gold and silver). The limestone surface and the capstone would have made the entire pyramid sparkle in sunlight.

Inside the Great Pyramid are three burial chambers. The first lies underground, the second, often mistakenly called the Queen's Chamber, is located just above ground. The third and final chamber, the King's Chamber, lies in the heart of the pyramid. A Grand Gallery leads up to it. It is believed that Khufu was buried in a heavy, granite coffin within the King's Chamber.

It seems amazing that an ancient culture could build something so massive and precise, especially since they had only copper and bronze tools to worth with. Exactly how they did this has been an unsolved puzzle perplexing people for centuries. It is said that the whole project took 30 years to complete—10 years for preparation and 20 for the actual building. Many believe this to be possible, with the chance that it could have been built even faster.

The workmen who built the Great Pyramid were not slaves, as once thought, but regular Egyptian peasants who were conscripted to help with building for about three months out of the year -- i.e. during the time when the Nile floods and farmers were not needed in their fields.

The stone was quarried on the east side of the Nile, cut into shape, and then placed on a sledge that was pulled by men to the river's edge. Here, the huge stones were loaded onto barges, ferried across the river, and then dragged to the construction site. It is believed that the most likely way the Egyptians got those heavy stones up so high was by building a huge, earthen ramp. As each level was completed, the ramp was built higher, hiding the level below it. When all the huge stones were in place, the workmen worked from top to bottom to place the limestone covering. As they worked downward, the earthen ramp was removed little by little. Only once the limestone covering was completed could the ramp

be fully removed, and the Great Pyramid be revealed. No one is sure how long the Great Pyramid stood intact before being looted, but it was probably not long. Centuries ago, all of the pharaoh's riches had been taken, even his body had been removed. All that remains is the bottom of his granite coffin—even the top is missing. The capstone is also long gone.

Thinking there was still treasure inside, Arab ruler Caliph Ma'mum ordered his men to hack their way into the Great Pyramid in 818 CE. They did manage to find the Grand Gallery and the granite coffin, but it had all been emptied of treasure long ago. Upset at so much hard work with no reward, the Arabs pried off the limestone covering and took some of the cut-stone blocks to use for buildings. In total, they took about 30-feet off the top of the Great Pyramid. What remains is an empty pyramid, still grand in size but not as pretty since just a very small portion of its once beautiful limestone casing remains along the bottom.

The Great Pyramid at Giza now sits with two other pyramids. The second one was built by Khafre, Khufu's son. Although Khafre's pyramid appears larger than his father's, it's an illusion since the ground is higher under Khafre's pyramid. In reality, it is 33.5-feet shorter. Khafre is believed to have also built the Great Sphinx, which sits regally by his pyramid. The third pyramid at Giza is much shorter, standing only 228-feet high. It was built as a burial place for Menkaura, Khufu's grandson and Khafre's son.

To help protect these three pyramids at Giza from further vandalism and disrepair, they were added to the UNESCO World Heritage List in 1979.

27. Why did Khufu build the Great Pyramid of Giza?
    (A) He built the pyramid as his final resting place for when he passed away.
    (B) He built the pyramid to overshadow the other pyramid built by his father.
    (C) He wanted to break the world's record at that time.
    (D) He wanted to build a monument to commemorate the late pharaoh, Sneferu.

28. What can be inferred from the passage about the "Seven Ancient Wonders of the World"?
    (A) The Great Pyramid of Giza was never included in the list.
    (B) The Great Pyramid of Giza was one of the seven wonders because of its location.
    (C) The Hanging Gardens of Babylon was one of the Seven Ancient Wonders of the World.
    (D) The other six Ancient Wonders of the World do not exist anymore.

29. Who built the first pyramid?
    (A) Hetepheres I
    (B) Khafre
    (C) Khufu
    (D) Sneferu

30. What can be inferred from the passage about Khufu?
    (A) He ruled Egypt for 26 years.
    (B) He used slaves to build the Great Pyramid of Giza.
    (C) He was not loved by his people.
    (D) The only image of him was from a tiny ivory statue.

31. The word "beneficent" in line 22 is closest in meaning to ....
    (A) benign
    (B) excellent
    (C) generous
    (D) mischievous

32. The word "astound" in line 24 could be best replaced by ....
    (A) amaze
    (B) bore
    (C) calm
    (D) enlighten

33. On which side of the pyramid is the entrance located?
    (A) The east side.
    (B) The north side.
    (C) The south side.
    (D) The west side.

34. The word "perplexing" in line 50 is closest in meaning to ....
    (A) difficult to understand
    (B) impossible to see through
    (C) make someone feel frightened
    (D) make someone feel uncertain

35. How long did it take to prepare to build the Great Pyramid?
    (A) 10 years
    (B) 20 years
    (C) 30 years
    (D) 40 years

36. The description of how the Great Pyramid of Giza was built could be found in paragraph ....
    (A) 7
    (B) 10
    (C) 12
    (D) 14

37. The word "looted" in line 68 could be best replaced by ....
    (A) extinct
    (B) liberated
    (C) plundered
    (D) preserved

38. What can be found in the Great Pyramid of Giza in a present day?
    (A) A small portion of limestone.
    (B) Gold in the Grand Gallery.
    (C) Only the granite coffin of Khufu.
    (D) The capstone of the pyramid.

39. Which statement is true regarding Khafre's pyramid?
    (A) It is larger than Khufu's pyramid.
    (B) Khafre's pyramid is located on the lower ground than Khufu's pyramid.
    (C) Khufu's pyramid is 33.5 feet taller than Khafre's pyramid.
    (D) The Great Sphynx was built and put between the Khafre's & Khufu's pyramids.

40. Which pyramid at Giza is the shortest?
    (A) Khafre's
    (B) Khufu's
    (C) Menkaura's
    (D) Sneferu's

Questions 41—50

Line

Antonio Vivaldi, in full Antonio Lucio Vivaldi, (born March 4, 1678, Venice, Republic of Venice [Italy]—died July 28, 1741, Vienna, Austria), Italian composer and violinist who left a decisive mark on the form of the concerto and the style of late Baroque instrumental music.

(5) Vivaldi's main teacher was probably his father, Giovanni Battista, who in 1685 was admitted as a violinist to the orchestra of the San Marco Basilica in Venice. Antonio, the eldest child, trained for the priesthood and was ordained in 1703. His distinctive reddish hair would later earn him the soubriquet Il Prete Rosso ("The Red Priest"). He made his first known public appearance playing alongside his (10) father in the basilica as a "supernumerary" violinist in 1696. He became an excellent violinist, and in 1703 he was appointed violin master at the Ospedaledella Pietà, a home for foundlings. The Pietà specialized in the musical training of its female wards, and those with musical aptitude were assigned to its excellent choir and orchestra, whose much-praised performances assisted the institution's quest for (15) donations and legacies. Vivaldi had dealings with the Pietà for most of his career: as violin master (1703—09; 1711—15), director of instrumental music (1716—17; 1735—38) and paid external supplier of compositions (1723—29; 1739—40).

Soon after his ordination as a priest, Vivaldi gave up celebrating mass because of a chronic ailment that is believed to have been bronchial asthma. Despite this circumstance, he took his status as a secular priest seriously and even earned the reputation of a religious bigot.

Vivaldi's earliest musical compositions date from his first years at the Pietà. Printed collections of his trio sonatas and violin sonatas respectively appeared in 1705 and 1709, and in 1711 his first and most influential set of concerti for violin and string orchestra (Opus 3, L'estroarmonico) was published by the Amsterdam music-publishing firm of Estienne Roger. In the years up to 1719, Roger published three more collections of his concerti (opuses 4, 6, and 7) and one collection of sonatas (Opus 5).

Vivaldi made his debut as a composer of sacred vocal music in 1713, when the Pietà's choirmaster left his post and the institution had to turn to Vivaldi and other composers for new compositions. He achieved great success with his sacred vocal music, for which he later received commissions from other institutions. Another new field of endeavor for him opened in 1713 when his first opera, Ottone in villa, was produced in Vicenza. Returning to Venice, Vivaldi immediately plunged into operatic activity in the twin roles of composer and impresario. From 1718 to 1720 he worked in Mantua as director of secular music for that city's governor, Prince Philip of Hesse-Darmstadt. This was the only full-time post Vivaldi ever held; he seems to have preferred life as a freelance composer for the flexibility and entrepreneurial opportunities it offered. Vivaldi's major compositions in Mantua were operas, though he also composed cantatas and instrumental works.

The 1720s were the zenith of Vivaldi's career. Based once more in Venice, but frequently traveling elsewhere, he supplied instrumental music to patrons and customers throughout Europe. Between 1725 and 1729 he entrusted five new collections of concerti (opuses 8—12) to Roger's publisher successor, Michel-Charles Le Cène. After 1729 Vivaldi stopped publishing his works, finding it more profitable to sell them in manuscript to individual purchasers. During this decade he also received numerous commissions for operas and resumed his activity as an impresario in Venice and other Italian cities.

In 1726 the contralto Anna Girò sang for the first time in a Vivaldi opera. Born in Mantua about 1711, she had gone to Venice to further her career as a singer. Her voice was not strong, but she was attractive and acted well. She became part of Vivaldi's entourage and the indispensable prima donna of his subsequent operas, causing gossip to circulate that she was Vivaldi's mistress. After Vivaldi's death she continued to perform successfully in opera until quitting the stage in 1748 to marry a nobleman.

In the 1730s Vivaldi's career gradually declined. The French traveler Charles de Brosses reported in 1739 with regret that his music was no longer fashionable. Vivaldi's impresarial forays became increasingly marked by failure. In 1740 he traveled to Vienna, but he fell ill and did not live to attend the production there of his opera L'oracolo in Messenia in 1742. The simplicity of his funeral on July 28, 1741, suggests that he died in considerable poverty.

After Vivaldi's death, his huge collection of musical manuscripts, consisting mainly of autograph scores of his own works, was bound into 27 large volumes. These were acquired first by the Venetian bibliophile Jacopo Soranzo and later by Count Giacomo Durazzo, Christoph Willibald Gluck's patron. Rediscovered in the 1920s, these manuscripts today form part of the Foà and Giordano collections of the National Library in Turin.

41. How old was Vivaldi when he passed away?
    (A) 28 years old.
    (B) 41 years old.
    (C) 63 years old.
    (D) 78 years old.

42. Below statement about Vivaldi is true EXCEPT …
    (A) He was a priest.
    (B) He was the first child in his family.
    (C) His father was a pianist.
    (D) His hair was red.

43. The word "foundling" in line 12 could be best replaced by ….
    (A) orphan
    (B) retiree
    (C) unemployed people
    (D) young children

44. What was the only permanent role that Vivaldi had?
    (A) A choirmaster for the Pieta.
    (B) A composer of sacred vocal music.
    (C) A director of secular music in Mantua.
    (D) An impresario in Vicenza.

45. The word "zenith" in line 41 is closest in meaning to ….
    (A) downturn
    (B) peak
    (C) start
    (D) turning point

46. Why did Vivaldi stop publishing his works?
    (A) Commissions for opera were enough for his living cost.
    (B) He was too busy to compose new sonatas.
    (C) His publisher friend, Estienne Roger, passed away.
    (D) The profit was greater when his collections were sold directly to the buyers.

47. What can be inferred from the passage about Anna Girò?
    (A) She possessed unique voice.
    (B) She quit performing in an opera after Vivaldi died.
    (C) She was 15 years old when she sang for the first time in a Vivaldi opera.
    (D) She was Vivaldi's love interest.

48. The word "he" in line 58 refers to ....
    (A) Charles de Brosses
    (B) Michel-Charles Le Céne
    (C) Vienna
    (D) Vivaldi

49. How did the author infer that Vivaldi was poor?
    (A) From his failed opera, L'Oracolo in Messenia.
    (B) From his modest funeral.
    (C) From the rejection of his works.
    (D) From Vivaldi's fashion style.

50. Where are the Vivaldi's manuscripts kept?
    (A) Montua
    (B) Turin
    (C) Venice
    (D) Vienna
